Comment on "Money and Interest Rates": In its January meeting, the European Central Bank once again lowered eurozone interest rates by 25 basis points, considering that the disinflationary process is well on track, despite causing some decoupling from the Fed, which has decided to keep rates unchanged. This decision had already been anticipated by the markets. In January, the 12-month Euribor monthly average (the main reference for mortgages) rose to 2.525% from the December average of 2.434%, while the 3-month reference rate decreased from 2.839% in December to 2.736% in January. The yield on the 10-year government bond increased from 3.0% in December to 3.1% in January.
